

Grow Your Business with NIA's Thermal Insulation Inspector™

This certification will be valuable for you and your business

if you work with or are involved in the mechanical insulation industry and have a responsibility for areas such as contracts, maintenance, business development, quality assurance (QA)/quality control (QC), project oversight, estimating, management, product development, specifications, or inspections.

NIA Certified Thermal Insulation Inspector™ Benefits

Quality insulation systems of new or existing systems help to improve equipment life and process output, promote employee and public safety, save on energy costs, protect the environment, and reduce costs associated with non-compliant mechanical insulation specifications and improper or insufficient maintenance. This certification program will:

- educate and train insulation inspectors on mechanical insulation
- how to verify that the insulation is being installed to the specification
- and how to identify potential areas of concern during initial installation or in ongoing operations.

Top 3 Benefits for Mechanical Insulation Contractors:

- Provides a mechanism to request specification clarity.
- Complements a new or existing QA/QC program and provides a platform for supporting the contractor position on potential installation disputes.
- Offers a means of competitor differentiation.

Invest in Your Business

In addition to the sales and marketing benefit of having certified inspectors on your staff, this one-of-a-kind certification can be an integral part of QA/QC, commissioning, and other processes while helping to achieve the benefits the mechanical insulation system was designed for.

David Kitto
Project Manager
Patriot Insulation

Why I Became a Certified Insulation Inspector

"I've been in the industry 32 years, and I've always been keen on increasing the level of professionalism in our trade. It was great to hear that engineering firms and large mechanical insulation customers are asking for this certification to ensure they are getting what is specified and also to clarify conflicting specifications. As a contractor, I welcome this certification and the new business opportunities it will provide."

Upcoming Courses:

August 6-9, 2019

Houston, Texas

December 3-6, 2019

Houston, Texas
